The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Bilger et al. The tubular elements of Bilger are capable of having fluid flows through its interior.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bilger et al. in view of Salmi. Bilger shows the claimed ladder structure with the exception of the buttresses. Salmi shows buttresses connected to his ladder rungs 26. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Bilger to comprises, as taught by Salmi, to reinforce his rungs.

Claims 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Howell in view of Bilger. Howell shows the claimed ladder structure with the

exception of his structure not formed by interconnecting tubular elements with interior communicating passages. Bilger shows a ladder structure formed from tubular elements having interior communicating passages. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Howell for his ladder structure to be formed from interconnected tubular elements having interior communicating passages, as taught by Bilger, to enable a strong lightweight economical structure.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Howell and Bilger et al., as applied to claim 5-9 above, and further in view of Salmi as applied above.

Claim 14 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/10/06.
